

GNRS Evaluation (Current)

- ORBIT + OMF
- Install, configure, and run servers and clients on ORBIT nodes
- Generated automatically from network topology files
- Clients send insert/lookup messages from trace files
- Statistics collected at the end

GNRS Evaluation (Future)

- Multiple servers or clients per ORBIT node
- Clients will use a loosely-synchronized “global” trace file
- Automate experiments for a series of topologies
- Automatic statistics aggregation and collation
- More detailed statistics generated by server
